ADVANCED CARDIAC LIFE SUPPORT

Providers will enhance their skills in treating adult victims of cardiac arrest or other cardiopulmonary emergencies. This course emphasizes the:

- importance of basic life support CPR to patient survival
- integration of effective basic life support with ACLS interventions
- importance of effective team interaction and communication during resuscitation

The course includes simulated clinical scenarios that encourage active, hands-on participation through learning stations where students practice essential skills individually, as part of a team, and as team leader.

Audience

For healthcare providers working in emergency treatment, intensive care or critical care, and other professionals who may need to respond to a cardiovascular emergency.

Course Content

- 1-Rescuer CPR, AED
- Manual Defibrillation
- Airway Management
- Rhythm Recognition
- IV Access
- Use of Medications
- Cardioversion
- Transcutaneous Pacing
- Effective Resuscitation Team Dynamics

Features

- Course uses learning stations for practice of essential skills
- Students engage in simulated clinical scenarios that encourage active, hands-on participation
- Hands-on class format reinforces skills proficiency
- Classroom-based works well for learners who prefer group interaction and instructor feedback while learning skills
